

<b>Naslov projekta</b>	Izgradnja hidroelektrarne B na jezu Kneževo
<b>Začetek – konec</b>	januar 2023 – december 2024
<b>Vrednost projekta</b>	450.000 EUR
<b>(So)financiranje RS</b>	225.000 EUR
<b>Država prejemnica/ prejemnik donacije</b>	Severna Makedonija / HS Zletovica
<b>Izvajalec projekta</b>	še ni izbran
<b>Vsebinsko področje po OECD klasifikaciji</b>	CRS CODE 23220
<b>Opis projekta</b>	<p>Hydro system Zletovica is a permanent system for water management, which provides drinking water for more than 100,000 inhabitants. In 2010, a dam was built on the Zletovica river, where the potential of water energy was not fully utilized. Within the project, the HE B Knezevo will be built, which will produce electricity by utilizing the potential of the released water in a quantity of 300 l/s, necessary for ensuring the biological minimum of the dam. The project includes architectural and construction work, procurement and installation of mechanical and electrical equipment, water supply, sewerage, heating, ventilation and air conditioning, and electrical distribution network, to which preventive tests and preparatory work will be carried out. The construction of HE B Knezevo will contribute to the improvement of energy self-sufficiency and the reduction of dependence on the possibility of energy production in other regions of the country and on the import of electricity.</p>
<b>Stanje projekta</b>	Projekt je v izvajanju.
