| <b>Project Name</b>                              | Circular biowaste management in Kamenica  |
| <b>Start–End</b>                                 | January 2024 – October 2026   |
| <b>Project Value</b>                             | 699.741 EUR   |
| <b>Slovenian Funding</b>                         | 419.845 EUR   |
| <b>Recipient Country/<br/>Donation Recipient</b> | Kosovo / Municipality Kamenica  |
| <b>Project Contractor</b>                        | Not selected yet  |
| <b>CRS CODE</b>                                  | CRS CODE 14050  |
| <b>Project Description</b>                       | <p>Waste management is considered one of the most serious environmental problems in Kosovo, especially in under-resourced peripheral municipalities such as Kamenica. Most of the existing landfills have reached their capacity, and the collection, transport and disposal of municipal waste is not available to all users. As a result, most waste is incinerated or dumped in illegal landfills, posing long-term environmental risks such as groundwater contamination and negative impacts on human health, the environment and biodiversity. The Municipality of Kamenica will thus establish a more sustainable way of managing bio-waste, which is currently dumped in a municipal landfill, where it is not treated, and which is located very far from the town centre, resulting in high transport costs. The project will establish a composting system for the circular management of bio-waste, which will divert a significant proportion of bio-waste from the municipal landfill (bio-waste from 90 economic operators and 5 schools in the municipality). The composting plant will be equipped with advanced rotational composting technology, producing high quality compost or organic fertiliser, which will be used to green the site.</p> |
| <b>Project Phase</b>                             | The project is being implemented.   |
