

Naslov projekta	Izgradnja hidroelektrarne B na jezu Kneževo
Začetek – konec	januar 2023 – julij 2025
Vrednost projekta	450.000 EUR
(So)financiranje RS	225.000 EUR
Država prejemnica/ prejemnik donacije	Severna Makedonija / HS Zletovica
Izvajalec projekta	TM LLC Štip
Vsebinsko področje po OECD klasifikaciji	CRS CODE 23220
Opis projekta	<p>Hydro system Zletovica is a permanent system for water management, which provides drinking water for more than 100,000 inhabitants. In 2010, a dam was built on the Zletovica river, Knezevo, whose potential of water energy is not fully utilized. In the scope of the project, the HE B Knezevo will be built, which will produce electricity by utilizing the potential of the water discharge of 300 l/s, necessary for ensuring the biological minimum of the dam Knezevo. The project of HE construction includes architectural and construction work, procurement and installation of mechanical and electrical equipment and maintenance of water, sewerage, heating, cooling and air conditioning, as well as electrical distribution network, to which preventive tests and preparatory work will follow. The construction of HE B Knezevo will contribute to the improvement of energy self-sufficiency and the reduction of dependence on the possibility of energy production in other regions of the country and on the import of electricity.</p>
Stanje projekta	Projekt je v izvajanju.
