

<b>Naslov projekta</b> <i>Project Name</i>	Sanacija območja obrata Phenol v industrijski coni Lukavac / <i>Remediation of the Phenol Coke Factory Industrial Zone</i>
<b>Obdobje izvajanja projekta/</b> <i>Start - End</i>	Julij 2020 – julij 2022
<b>Vrednost projekta po komercialni pogodbi/</b> <b>(so)financiranje RS</b> <i>Project Value/</i> <i>RS Co-financing</i>	264.669 EUR / 129.688 EUR
<b>Država prejemnica pomoči/</b> <b>prejemnik donacije</b> <i>Recipient Country/</i> <i>Donation Recipient</i>	Federacija Bosne in Hercegovine / Vlada Kantona Tuzla, Ministrstvo za prostorsko načrtovanje in varovanje okolja <i>Federation of Bosnia and Herzegovina / Government of Tuzla Canton, Ministry of Physical Planning and Environmental Protection</i>
<b>Izvajalec projekta/</b> <i>Project Operator</i>	Kemis-BH d.o.o. Lukavac, Bosna in Hercegovina in TQM d.o.o. Lukavac, Bosna in Hercegovina
<b>Vsebinsko področje po OECD klasifikaciji</b> <i>CRS CODE</i>	CRS CODE 41010
<b>Opis projekta</b> <i>Project Description</i>	<p>Tovarna Phenol v industrijski coni Lukavac je začela delovati leta 1953, zaradi vojne pa so jo leta 1992 zaprli. Od takrat niso več izvajali vzdrževalnih del, prav tako pa ni bila nikoli sanirana okolica. Omenjeno območje je zaradi težke industrije (izdelava koksa, cementa, itd.) vir onesnaženja za celotno občino Lukavac. V sklopu projekta bodo najprej narejene raziskave, ki bodo podale ocene tveganja za okolje in zdravje ljudi ter bodo predstavljale osnovo za tehnični načrt, po katerem bo izvedena sanacija onesnaženega industrijskega območja. Z namenom da se minimizira dodatno onesnaževanje, bodo uporabljeni sodobni pristopi in tehnologija. Sanirano območje bo prekrito z novo, neonesnaženo prstjo. Raven onesnaženosti vodnih virov in prsti se bo bistveno zmanjšala, kar bo prispevalo k manjšemu tveganju za zdravje ljudi na območju industrijske cone Lukavac in v širši okolici.</p> <p><i>The Phenol factory in the Lukavac industrial zone started operating in 1953, and it was closed due to the war in 1992. Since then, no maintenance work has been carried out and the surroundings have never been remediated. Due to heavy industry (production of coke, cement, etc.), the mentioned area is a source of pollution for the entire area of Lukavac. As part of the project, firstly research will be carried out to provide risk assessments for the environment and human health. This will be base for the technical plan by which the remediation of the polluted industrial area will be carried out. With the aim to minimize additional pollution, modern approach and technology will be used. The remediated area will be covered with new, uncontaminated soil. The level of pollution of water resources and soils will be significantly reduced, which will mitigate the risk to human health in the area of the Lukavac industrial zone and beyond.</i></p>
<b>Stanje projekta</b> <i>Project Phase</i>	Projekt je v izvajanju. <i>The project is being implemented.</i>
